Articulating Paper

- Soft, smooth, non-sticking, sensitive surface for marking at every point of articulation.
- Articulating paper is a diagnostic tool used in dentistry to highlight occlusal contacts & the distribution of occlusal forces.
- That is, it marks those points on the teeth where the teeth contact during biting and grinding.
- Articulating paper is made of a thin, non-adhesive paper strip covered in fluorescent ink or dye-containing wax.
- A strip of articulating paper is placed between the teeth while the desired mandibular movements are performed.
